## EXAMPLE 65 Decibel (Ldn) General Note Sample

### How to use:

When the commission letter states that the project lies within the 65 Ldn contour for sound level, meaning that the subject property is close enough to an airport noise level that special construction standards are required for certain uses, it is required that a note is placed on the final plat. This note is inserted in numbered sequence in the **General Notes**, along with the blanked being filled in with the name of the airport. Below is the example for the note that may be required.

1. The site is within the 65 Ldn contour of \_\_\_\_\_ and this noise level may require special construction standards for certain uses per the building code.
